

An **EXCLUSIVE** service offered
by Gulf Coast Supply

TIME = MONEY
SO SAVE BOTH
WITH **JET CRATING**

From the Trusted Name
in Metal Roofing

WHY?

- Decreases mobilization time by one-third or more
- Decreases errors in the field
- Saves space on job site
- Makes layout of panels a breeze

Jet Crating is built around **three** core elements that make roofing projects more organized and efficient:

1. CAD Drawings with Roof Sections Identified

We provide detailed CAD drawings that break down each roof section, making it easier for crews to follow precise measurements and layouts.

2. Panels Run and Crated per Roof Section

Each roof section's panels are crated individually, with bundle tickets clearly identifying the section and the panels included. This method ensures that everything is organized and easy to locate upon delivery.

3. Printing for Panel Length Identification

To make the installation process even smoother, the specific length is printed on each panel, making it simple for crews to find the right panel for the right section without confusion or extra measuring saving valuable job-site time. * Jet crating is a service available exclusively at our manufacturing locations

Streamlines projects with organized segmentation and easy-to-follow instructions

Eliminates guesswork on panel placement so roofing contractors avoid delays

Available to all clients and included in Platinum Roofer Benefits Package
